

Demo Author

Demo Engineer · Public portfolio engine

Remote · UTC flexible · EU / US overlap · Demo content

Fictional product engineer used to validate the public portfolio engine end to end. Demo case studies model AI-assisted operational software where every model output enters the system as a reviewable proposal – backends own permissions, audit trails and stock math, while the assistant drafts, retrieves and routes work.

EXPERIENCE

2026 – now Public portfolio engine

Open source demo

A sanitized version of a production portfolio system: typed bilingual content, static Markdown mirrors, custom design tokens, route-aware case pages, and privacy-first telemetry.

2025 – 2026 AI workflow prototypes

Demo track

Fictionalized operational tools showing human-reviewed AI actions, durable audit logs, and backend-owned permission boundaries.

2024 – 2025 Internal tools architecture

Systems

Example admin surfaces, ingestion queues, structured reports, and incident-safe rollback paths used to exercise the case-study layout.

2023 – 2024 Full-stack product systems

Foundation

Generic product engineering background: backend APIs, frontend workflows, worker queues, deployment scripts, and operator-facing UX.

FEATURED PROJECTS

AI CRM · Demo lead desk

Demo · 6 weeks equivalent

Fictional operator desk where an AI assistant drafts lead summaries, suggests next actions, and waits for human approval before touching customer state.

STACK · FastAPI · React · PostgreSQL · Redis · LLM tools

- Demo CRM for inbound leads – assistant drafts summaries, qualification states and follow-ups; operators approve, edit or reject every change.
- Hard boundary: model output enters the system as a proposal record. Backend owns permissions, state transitions and durable audit rows.
- Narrow read tools, no SQL-style execution – useful capability is retrieval plus drafting, not unrestricted data access.
- Acceptance metrics tracked separately for accepted, edited and rejected suggestions.

Roblox Arena · Demo runtime

Demo · gameplay systems

Fictional multiplayer arena slice focused on deterministic combat rules, server authority, and tool-assisted content balancing.

STACK · Lua · Roblox services · data tables · analytics events

- Demo arena where combat, rewards and spawn logic stay server-owned while designers tune enemies, abilities and economy through structured data.
- Server-authoritative balance tables – no client-side authority over rewards.
- Telemetry loops on session length, encounter difficulty and reward acceptance feed the next balance pass.
- Demo content only; placeholder media stand in for real assets.

AI Video Editor · Demo timeline

Demo · R&D prototype

Fictional media workspace where prompts generate timeline edits as diffable changesets instead of mutating the project directly.

STACK · React · Remotion · worker queue · local media tools

- Demo editor where chat commands create proposed clip edits, captions and render jobs as diffable changesets.
- User reviews each changeset before it touches the committed timeline.
- Two-cadence playhead split: live playback time decoupled from committed editor state.
- One async job registry handles render and transcription queues with the same shape.

Six demo case studies – explore the public portfolio engine at ilyadev.xyz/cases

STACK

AI & Agents. Tool contracts · LLM orchestration · Human review · Audit trails · Cost tracking · RAG

Backend. Python · FastAPI · Django · Celery · PostgreSQL · Redis · Pydantic · SQLAlchemy

Frontend. React · TypeScript · Vite · React Router · Zustand · CodeMirror · Remotion

Telemetry. sendBeacon · SQLite WAL · Daily rollups · Basic Auth · Retention windows

Design. CSS tokens · OKLCH · Grid systems · View transitions · Reduced motion

Automation. Node scripts · GitHub Actions · Static generation · Markdown mirrors

Media. ffmpeg · Canvas · Image optimization · Lite embeds · SVG placeholders

Ops. Docker · Caddy · systemd · Backups · Log rotation

Workflow. Specs first · Small PRs · CI guards · Reviewable diffs · Runbooks

EDUCATION

— — Public demo content · Replace with real education when forking the engine.

LANGUAGES

English — demo placeholder · **Other** — demo placeholder
